

STAYING ON GP?

You're not alone.

Optimize your GP System Now and into the Future

If you're committed to staying on Microsoft Dynamics GP, you're not alone. Many businesses want to extend the life of GP while keeping it secure, scalable, and efficient—especially with Microsoft's support ending as soon as January 2028 for older versions and December 2029 for the latest ones. At Crestwood Associates, we help businesses like yours modernize GP with strategic upgrades, automation, and cloud solutions—without forcing a full migration. Let's explore how to keep GP working for you, now and in the future.

How to Optimize GP for Long-Term Success

Take control of your ERP with these proven steps to modernize GP and stay ahead of Microsoft's deadlines.

MOVE GP TO THE CLOUD

(Eliminate On-Premise Risks & Costs)

Hosting GP on Azure or a private cloud transforms your system without replacing it:

- Secure, remote access for your team from anywhere—perfect for hybrid workforces.
- Lower IT costs by eliminating physical servers—many clients see savings of 20-30% on maintenance.
- Stronger security with automatic updates, reducing risks as GP patches slow after 2029.
- Scalable infrastructure that grows with your business, no hardware upgrades needed.

AUTOMATE MANUAL PROCESSES

(Boost Efficiency Without Disruption)

Cut the busywork and keep GP humming with automation:

- Reduce errors with workflow tools—say goodbye to manual data entry mistakes.
- Streamline financials like AP automation or bank reconciliation—saving hours weekly.
- Improve inventory with real-time data syncing across your operations.
- Leverage Power BI and AI for smarter, faster decisions without changing systems.

Enhance Reporting & Visibility

(Turn Data Into Action)

Stop wrestling with spreadsheets and unlock GP's potential:

- Real-time dashboards for instant insights—no more waiting on month-end reports.
- Custom financial reports delivered faster—clients often cut reporting time in half.
- Modern BI tools like Power BI for forecasting that keeps you competitive.

Upgrade GP & Expand Capabilities

(Maximize Stability)

Keep GP secure and supported while adding horsepower:

- Latest updates (e.g., 18.6 or 18.7 as of 2025) ensure compliance through 2029.
- Third-party integrations from ISVs extend GP for e-commerce, CRM, and more.
- Custom upgrades to reports and workflows align GP with your evolving needs.

Why Modernize GP Instead of Migrating?

Modernization is gaining traction among GP users for good reason:

- No disruption—stick with a system your team knows, avoiding the learning curve of a new ERP.
- Cost-effective—extend GP's life for a fraction of a full migration's cost.
- Flexibility—keep custom processes intact while you evaluate cloud options like Dynamics 365.
- With support winding down (January 2028 for older versions, December 2029 for newer ones), modernization buys you time and keeps your business running smoothly.

What's the Best Next Step for You?

1. Evaluate your setup—pinpoint where GP shines and where it's lagging.
2. Identify upgrades—see if cloud hosting, automation, or reporting boosts make sense.

Get a roadmap—plan GP's next 3-5 years, tailored to your goals.

It was great that Crestwood’s Implementation Manager really knew both systems well. That was a big advantage for us because she knows Great Plains, she knows Business Central, so she understood what we were trying to accomplish.
